

Analysing Intellectual Property Data

Tim Higgs, Senior Analyst – ClearviewIP Ltd

ClearviewIP is an intellectual property consulting company, working with clients to develop their IP strategy and realise value from their IP.

Tim's research at the Institute of Cosmology and Gravitation (ICG) involved data analysis of the stellar populations of massive galaxies. During his PhD, Tim developed strategies that enabled him to work with large, noisy, incomplete datasets. At ClearviewIP, these data cleansing techniques along with methods of manipulating data in order to have manageable file sizes have proved particularly useful.

"Being able to produce meaningful statistics from large and, inevitably, imperfect datasets is a valuable skill in the commercial environment"
